

ANONA

A collaborative creative software company

TENET

Our first product

Every technological wave improves execution.
TENET improves decision-making.

Prepared By David Parker

Context

Creative development is slower and more expensive than it should be. In advertising and film, the earliest phase of a project is often the most chaotic.

Scripts evolve.
Clients react.
Teams build decks.
Revisions accumulate.

Weeks can pass before anyone truly sees whether an idea works.

AI has made it easy to generate content.
But it has not made it easier to align around direction.

**AI made content generation easy.
It made creative alignment harder.**

Why Now?

Generative AI has made it dramatically easier to produce beautiful images, video, and content. Execution is no longer the bottleneck.

But when creation becomes easy, something else becomes scarce: structure, judgment, and direction. Teams can generate endless variations, but they still struggle to decide which ideas deserve to move forward.

More options.
More noise.
More stakeholder opinions.

The result is paradoxical. The faster teams can generate creative, the harder it becomes to reach conviction.

The shift in real numbers

Three Cisco campaigns. Three consecutive years. One story.

These numbers come from JANE, a production company that has run three consecutive Cisco campaigns transitioning from full CG to full AI production.

Hard costs dropped from 62 cents on the dollar to 23 cents. Margins nearly doubled and held at scale.

This is not a projection.
This is not a model.
This is what happened.

AI production has opened a margin window. But windows close.

Clients are already learning to ask for more because they know generation is cheap. The next competitive advantage won't be production efficiency. It will be creative conviction, knowing which idea to pursue before the abundance of options becomes paralysis.

That is the problem TENET solves.

2024	2025	2026
Full CG	Full AI	Full AI
37.8%	76.8%	77.1%
MARGIN	MARGIN	MARGIN
\$460,960	\$121,000	\$418,391
BUDGET	BUDGET	BUDGET
\$286,724	\$28,065	\$95,824
HARD COSTS	HARD COSTS	HARD COSTS

SCALING VALUE

The intelligence compounds with every customer added.

The Creative Intelligence Engine

Every AI company is a tools company until it has a proprietary dataset. We're building a proprietary repository of what works in creative storytelling.

DATA WE CAPTURE:

- Pacing patterns** - Which beat timings get approved faster
- Narrative sequencing** - What story structures work by vertical
- Iteration behavior** - Where teams get stuck, what they change
- Alignment signals** - How long decisions take, who approves what

TENET captures anonymized structural signals only. Scripts, brands, and proprietary concepts remain strictly confidential.

The more projects run through TENET, the more valuable it becomes for everyone. Creative validation becomes a compounding advantage, not a static tool.

"The more projects run through TENET, the more valuable it becomes for everyone."

Introducing Tenet

Picture this: your creative team uploads a script Monday morning; by lunch, they're reviewing five different edits. By Friday, the creative is client-approved, the shoot is scheduled, and the shots that can be fully AI are being developed in parallel. Not because AI is magic, but because we made the early ideation loop fast for creatives who typically spend 70 percent of their time on logistics instead of story.

TENET turns a script into a shared visual narrative, with pacing, tone, and structure, while ideas are still evolving and change is still free.

Teams can:

- Upload a script or outline

- Generate a timed narrative sequence

- Refine scenes collaboratively

- Adjust tone, structure, and direction in one shared environment

TENET is not a production tool.

It is a decision-making environment for early creative development.

TENET lives upstream of execution tools. It is not designed to create final assets. It is designed to structure the decision of what deserves to be created.

How Tenet Works

Most creative decisions are made about things nobody can fully see yet.

Scripts are read, not experienced. Boards are static. Decks describe what something might feel like.

TENET changes that.

Drop in a script. TENET builds a living version of it — paced, structured, moving — that the entire team can see, react to, and shape together in real time.

Not a draft. Not a deck. A shared experience of the idea as it actually is.

From that shared view...

The writer sees whether the pacing matches the intention.
The director sees whether the structure supports the story.
The producer sees whether the scope matches the budget.
The client sees whether the idea matches the brief.

Nobody is interpreting a document.
Nobody is imagining what something might become.
Everyone is reacting to the same thing at the same time.

That's when real decisions get made.
That's when the strongest idea survives.
That's when conviction arrives early enough to matter.

PRODUCTION HUB | PROJECT: ECLIPSE

ARONA X TENET

DAVID PARKER

Built For Teams

Creative is collaborative. Ideas are shaped by groups:

Writers
Directors
Producers
Agency leads
Clients

09

TENET recreates the creative room digitally.

Multiple stakeholders can log in, adjust scenes, comment, refine tone, and iterate together before committing to production budgets.

Earlier alignment reduces friction.

Earlier alignment reduces compromise.

Where TENET Sits

Creative technology today is dominated by execution tools:

- Design tools
- Editing software
- AI generators
- Rendering engines

TENET sits above them. It becomes the structured environment where teams:

10

- Evaluate direction
- Align stakeholders
- Reach conviction
- Then move downstream to execute

Execution tools create assets. TENET determines what deserves to be created. And when ideas change mid-production, which they always do, TENET makes the cost of that change visible before it becomes a crisis. Teams can evaluate a late pivot with the same clarity they had on day one.

Category Map

Creative production tools fall into three layers:

1. IDEATION AND ALIGNMENT

Where teams shape direction and reach conviction
TENET lives here

2. EXECUTION TOOLS

Design software
Editing platforms
VFX pipelines
AI generation tools

3. PRODUCTION & DISTRIBUTION

Production management
Asset delivery
Publishing pipelines

Most technology investment has focused on execution.

The structured environment where teams reach conviction before production begins remains largely undefined. **TENET defines that layer**

The Compounding Advantage

Every project that runs through TENET produces structured insight about creative decision making.

- Pacing patterns
- Narrative sequencing
- Iteration behavior

Over time this creates a growing dataset about what actually works in early creative development.

Future teams benefit from better scaffolding, faster exploration, and improved alignment from day one.

TENET captures anonymized structural signals only. Scripts, brands, and proprietary concepts remain strictly confidential.

The more projects run through TENET, the more valuable it becomes for everyone.

Creative validation becomes a compounding advantage, not a static tool.

Why I'm Building It

I've Lived This Problem

For over two decades I've worked inside advertising and post-production, building companies and helping bring creative work to life.

Across hundreds of campaigns and productions, I kept seeing the same thing happen.

Not because people lacked talent, but because clarity arrived too late.

By the time everyone could actually see the idea clearly, momentum and budget were already pushing the project forward.

Stronger ideas often appeared after it was too costly to pivot, or were killed early because the client couldn't see them yet and called them a gamble.

After years of watching that happen, I started building the tool I wished teams had at the beginning of the process.

ANONA builds that environment. TENET is the first product.

CUSTOMER JOURNEY

From high-touch pilot to scalable recurring revenue.

From Pilot To Platform

Every enterprise customer starts with validation, then graduates to independence. Our pilots don't just prove ROI, they create the playbooks that become self-serve software.

Our model inverts the traditional consulting trap, less human effort generates more revenue over time.

Each high-touch pilot becomes a low-touch template. Agency workflows, brand approval patterns, and stakeholder preferences become reusable software logic.

Each pilot creates playbooks used by 10+ future customers. We're not scaling consultants—we're scaling intelligence.

PLAYBOOK MULTIPLICATION

1 pilot → many templates → increasing scale with decreasing service intensity.

YEAR 1

15

YEAR 2

YEAR 3

 Services  Software

DECREASING TOUCH. INCREASING SCALE.

From high-touch pilot to self-serve platform — the model gets more efficient as it grows.

300%

Customer LTV Increase

vs. pilot-only engagements

Why This Matters

When teams arrive at conviction earlier in the process:

- Stronger ideas survive
- Fewer defensive compromises are made
- Budgets are spent on execution, not correction
- Production risk decreases

**The teams that get there first don't just make better work.
They make more of it.**

Starting Where ROI Is Clear

Advertising is the ideal proving ground.

- Fast development cycles
- Multiple stakeholders
- Significant production budgets
- High cost of late-stage changes

Even modest improvements in early-stage clarity can:

- Reduce unnecessary spend
- Minimize reshoots and revisions
- Increase content output within the same budget

From advertising, we expand into episodic and film development.

Focused entry. Controlled expansion.

Real-World Deployment

TENET is deployed immediately within JANE's professional production environment.

JANE operates as:

- First paying customer
- Structured beta partner
- Live production test case

We are collaborating with Lost Planet Editorial on active projects where TENET is being used to shape creative direction.

JANE is currently working on commercial projects for major brands including AT&T and Cisco.

As TENET develops, these real production environments create opportunities to introduce the product organically during active creative development.

This provides:

- Immediate revenue
- Continuous product feedback
- Real budget environments to validate quality and cost impact
- Natural exposure to major industry clients

Our goal is to make TENET the starting point of every project inside our production workflow.

We are not building in isolation.
We are building inside real creative work.

Structure

Base: Subscription per team

Expansion: Usage per project. This mirrors how creative work happens. Teams subscribe to the environment, then run multiple projects inside it.

Pricing Structure

1. Team Subscription (Core Revenue)

Teams pay monthly or annually for access.

Typical agency team: \$12K–\$36K annually depending on project volume.

Example tiers:

Direction → small creative teams

Development → agency teams

Production → larger organizations

Pricing includes:

Seats for collaborators

Project environments

Collaboration tools

Core validation features

This establishes predictable ARR.

2. Project-Based Usage (Expansion Revenue)

Creative work is project-driven.

Each project uses:

Compute

AI generation

Sequence creation

Storage

Collaboration time

So projects consume tokens or credits.

This creates usage expansion.

Meaning: more campaigns → more revenue.

Market Opportunity

Who buys first?

- Creative agencies
- Brand marketing teams
- Production companies

TAM: \$8.2B • **SAM:** \$2.1B • **SOM (Year 3):** \$25M ARR
Creative collaboration and AI production software market growing ~20.8% CAGR.
Early mover advantage as AI shifts from tools to workflows.

MARKET CAGR

Pilot SKUs and Go-To-Market wedge

The entry point is not a subscription. It's a sprint. We get in the door with a fixed-fee project, prove value on a real brief, then convert to seats.

We sell a pilot → convert to subscription.

PILOT SKUS - 48-Hour Moving-Boards (\$12K); 3-Week Creative-Validation Pilot (\$45K); 1-Day Diagnostic (\$7K)

WEDGE: services + pilots SKUs → lighthouse logos → convert to seats.

MOTIONS: founder-led sales; creative sprints; conference demos; creator community.

KEY KPIS: pilot→paid conversion %, logos, WAU/MAU, retained projects, time-to-moving-board vs. baseline, alignment <10 days.

Team

FOUNDER / OWNER

David Parker

20+ years VFX & directing; led launches at The Mill NY & LA; Cannes-winning work; built/ran Jogger at Cut+Run. Built/runs JANE Studios 2017 to present. (100% founder-owned vehicle for this product.)

ADVISORS

JANE — production partner providing live-job testing and craft feedback on active campaigns.

Laurent Ledru — 20+ years; Director. Creative Director. Visual Storyteller across Immersive, Animation, and Live-Action. AI Creator

Westley Sarokin — Creative Director. Emmy-nominated; 14 years at The Mill (Head of 2D; Emerging Tech CD).

Cole Schreiber — Creative Director. Writer/director with advertising and long-form experience.

Rich Rama — Executive Producer. Commercial production and client development lead.

Ben Sposato — Head of Production. End-to-end delivery across fast-turn campaigns.

Lost Planet Editorial:

Two Oscar-nominated editors providing craft validation on live production work.

Hank Corwin, 3× Oscar nominee

Saar Klein, 2× Oscar nominee

ADVISOR PRODUCT AND GTM COUNSEL:

Don Parker (Shotgun co-founder/CEO, exited)

Financial Projections

A mid-size agency running 20 campaigns annually at the Development tier generates: \$20K in project expansion revenue — approximately \$1K per campaign in usage credits Combined with the Development tier subscription:

Total account value: ~\$40K–\$55K per year

GROWTH MILESTONES

- ARR ramp — \$2M → \$8M → \$25M (Years 1–3)
- Break-even — Month 10–12 post-raise
- Headcount — ~15 FTE by Month 18
- Profitability — Positive net margin in Year 2

DAVID PARKER

Your Film

You asked me to read the script. I did something with it.

VERSION 1 — *[plays]* <https://f.io/djTf36Ra>

VERSION 2 — *[plays]* <https://f.io/s104gHxT>

SAME SCENE. SAME FOOTAGE. TWO EDITORS. TWO DIFFERENT FILMS.

Tone. Pacing. What to keep. What to cut.
That happened before a location was scouted. Before a dollar of production was committed. Before anyone had to guess.

This is the conviction layer.

Two Edits. Two Budgets.

Same scene. Same script. Two editorial choices.

In Version A — she falls into the water. Stunt coordinator. Water rig. Safety crew. Permits. That decision lives inside an editorial choice.

In Version B — you cut around it. The drama builds in the edit. The fall is implied. The emotion lands. The money goes somewhere else.

TENET scored both versions across four production dimensions — Producer Risk. Directing Complexity. Cinematography Difficulty. VFX Integration.

Clip A: 59 /110 **Clip B:** 51 / 110

Eight points of difference. Visible before a location is scouted. Before a stunt coordinator is booked. Before a dollar is committed.

This is what the conviction layer looks like for a film.

Studio Style Production Realism Evaluation Grid

Category 1: Producer Risk (Logistics + Budget)

Metric	Weight	What It Measures
Locations	5	Permits, moves, insurance
Company Moves	4	Lost shooting time
Cast Size	3	Scheduling and payroll
Extras / Crowd	2	Coordination and wardrobe
Vehicles	4	Drivers, safety, insurance
Special Units	6	Water, drone, stunt, animals
Weather Dependence	3	Schedule risk
Day/Night Mix	2	Night shoot cost
Action Coordination	5	Rehearsal and safety

The Scoring Table

TENET evaluates creative decisions across four dimensions — Producer Risk, Directing Complexity, Cinematography Difficulty, VFX Integration — each weighted by production impact.

The difference lives in Producer Risk — the stunt, the water, the permits. Everything else is nearly identical. That's where the decision is.

This is what TENET sees when you watch the same scene twice. The difference isn't taste. It's structure. And structure can be measured before a dollar of production is committed.

Category	Clip A	Clip B
Producer Risk	22	16
Director Complexity	14	13
Cinematography Difficulty	17	16
VFX Integration	6	6
Total	59 / 110	51 / 110
