

PARENT COMPANY

ANONA

A collaborative creative software company.

OUR FIRST PRODUCT

TENET

*Every technological wave improves execution. **TENET** improves decision-making.*

SEED \$3.75M

AI made content generation easy. It made creative alignment harder.

Creative development is slower and more expensive than it should be. In advertising and film, the earliest phase of a project is often the most chaotic.

Weeks can pass before anyone truly sees whether an idea works. AI has made it easy to generate content — but it has not made it easier to align around direction.

- Scripts evolve.
- Clients react.
- Teams build decks.
- Revisions accumulate.

When creation becomes easy, judgment becomes scarce.

Generative AI made it dramatically easier to produce beautiful images, video, and content. But when creation becomes easy, something else becomes scarce: structure, judgment, and direction.

Teams can generate endless variations, but they still struggle to decide which ideas deserve to move forward.

- More options.
- More noise.
- More stakeholder opinions.

*The faster teams can generate creative, the **harder it becomes to reach conviction.***

Three Cisco campaigns. Three consecutive years. One story.

SOURCE · JANE · FULL CG → FULL AI PRODUCTION

Across three consecutive years — full CG in year one, hybrid in year two, full AI most recently — hard costs dropped from 62 cents on the dollar to 23 cents. Margins nearly doubled, and held at scale.

This is not a projection. Not a model. This is what happened.

AI production has opened a margin window. But windows close — clients already know generation is cheap. The next advantage won't be production efficiency. It will be creative conviction: knowing which idea to pursue before abundance becomes paralysis.

That is the problem TENET solves.

Every AI company is a tools company until it has a proprietary dataset.

We're building a proprietary repository of what works in creative storytelling.

TENET captures anonymized structural signals only. Scripts, brands, and proprietary concepts remain strictly confidential.

The more projects run through TENET, the more valuable it becomes for everyone — a compounding advantage, not a static tool.

*“The more projects run through TENET,
the more valuable it becomes for everyone.”*

A script becomes a shared visual narrative — while change is still free.

Picture this: your team uploads a script Monday morning; by lunch they're reviewing five different edits. By Friday the creative is client-approved, the shoot is scheduled, and the shots that can be fully AI are being developed in parallel.

Not because AI is magic — but because we made the early ideation loop fast for creatives who typically spend 70% of their time on logistics instead of story.

TENET is not a production tool. It is a decision-making environment for early creative development.

TEAMS CAN

- Upload a script or outline
- Generate a timed narrative sequence
- Refine scenes collaboratively
- Adjust tone, structure, and direction in one shared environment

TENET lives upstream of execution tools. It is not designed to create final assets — it is designed to structure the decision of what deserves to be created.

Most creative decisions are made about things nobody can fully see yet.

Scripts are read, not experienced. Boards are static. Decks describe what something might feel like. Drop in a script and TENET builds a living version of it — paced, structured, moving — that the whole team can see, react to, and shape together in real time.

THE WRITER SEES Pacing Whether the pacing matches the intention.	THE DIRECTOR SEES Structure Whether the structure supports the story.	THE PRODUCER SEES Scope Whether the scope matches the budget.	THE CLIENT SEES The brief Whether the idea matches the brief.
---	--	--	--

Nobody interprets a document. Everyone reacts to the same thing at the same time. That's when the strongest idea survives.

UI VISUALIZATION

OPEN THE LIVE FIRST
EXPERIENCE

Creative is collaborative. Ideas are shaped by groups.

-
- Writers

 - Directors

 - Producers

 - Agency leads

 - Clients

TENET recreates the creative room digitally. Multiple stakeholders can log in, adjust scenes, comment, refine tone, and iterate together — before committing to production budgets.

*Earlier alignment reduces friction. **Earlier alignment reduces compromise.***

Execution tools create assets. TENET determines what deserves to be created.

Creative technology today is dominated by execution tools. TENET sits above them — the structured environment where teams reach conviction, then move downstream to execute.

EXECUTION TOOLS TODAY

- Design tools
- Editing software
- AI generators
- Rendering engines

TENET IS WHERE TEAMS

- Evaluate direction
- Align stakeholders
- Reach conviction
- Then move downstream to execute

When ideas change mid-production — which they always do — TENET makes the cost of that change visible before it becomes a crisis.

The layer where teams reach conviction is largely undefined. TENET defines it.

MOST TECHNOLOGY INVESTMENT HAS FOCUSED ON EXECUTION • TENET DEFINES THE LAYER ABOVE IT

Every project produces structured insight about creative decision-making.

Over time this creates a growing dataset about what actually works in early creative development. Future teams benefit from better scaffolding, faster exploration, and improved alignment from day one.

TENET captures anonymized structural signals only. Scripts, brands, and proprietary concepts remain strictly confidential.

The more projects run through TENET, the more valuable it becomes for everyone.

I've lived this problem.

For twenty-six years I've worked inside advertising and post-production — building companies and helping bring creative work to life. Across hundreds of campaigns and productions, I kept seeing the same thing happen.

Not because people lacked talent, but because clarity arrived too late. By the time everyone could actually see the idea clearly, momentum and budget were already pushing the project forward.

Stronger ideas often appeared after it was too costly to pivot — or were killed early because the client couldn't see them yet and called them a gamble.

After years of watching that happen, I started building the tool I wished teams had at the beginning of the process.

*ANONA builds that environment. **TENET** is the first product.*

From Pilot to Platform.

From high-touch pilot to scalable recurring revenue.

Playbook Multiplication.

1 pilot → many templates → increasing scale with decreasing service intensity.

Decreasing touch. Increasing scale.

From high-touch pilot to self-serve platform — the model gets more efficient as it grows.

THE BRIDGE METRICS

Customer LTV Increase

vs. pilot-only engagements

When teams arrive at conviction earlier.

- Stronger ideas survive
- Fewer defensive compromises are made
- Budgets are spent on execution, not correction
- Production risk decreases

*The teams that get there
first don't just make better
work. **They make more of it.***

Advertising is the ideal proving ground.

01	02	03	04
Fast development cycles	Multiple stakeholders	Significant production budgets	High cost of late-stage change

Even modest improvements in early-stage clarity reduce unnecessary spend, minimize reshoots and revisions, and increase content output within the same budget.

*From advertising, we expand into episodic and film development. **Focused entry.**
Controlled expansion.*

We are not building in isolation. We are building inside real creative work.

DEPLOYED INSIDE JANE

TENET is deployed immediately within JANE's professional production environment. JANE operates as:

- First paying customer
- Structured beta partner
- Live production test case

JANE is a separate, independently owned company — not a subsidiary of ANONA — currently running commercial work for major brands including AT&T and Cisco, with Lost Planet Editorial. Its spend is genuine third-party validation.

JANE

AT&T

CISCO

LOST PLANET
EDITORIAL

THIS PROVIDES, FROM DAY ONE

- Immediate revenue
- Continuous product feedback
- Real budget environments to validate quality and cost impact
- Natural exposure to major industry clients

Our goal: make TENET the starting point of every project inside our production workflow.

Base: subscription per team. Expansion: usage per project.

01 · CORE REVENUE

Team subscription

\$12K – \$96K / team / year

Teams pay monthly or annually for access. Pricing scales with team size and project volume — establishing predictable ARR.

Direction	Small creative teams · ~\$12K/yr
Development	Agency teams · ~\$36K/yr
Production	Larger orgs · up to ~\$96K/yr

Includes seats for collaborators, project environments, collaboration tools, and core validation features.

02 · EXPANSION REVENUE

Project-based usage

Tokens / credits per project

Creative work is project-driven. Each project consumes resources — so account value expands as a team runs more campaigns.

Compute	AI generation
Sequences	Creation & storage
Collaboration	Live session time

More campaigns → more revenue. Usage expansion rides on top of the recurring base.

Who buys first?

01 Creative agencies

02 Brand marketing teams

03 Production companies

~20.8% CAGR • creative collaboration & AI production software

\$100M serviceable-obtainable (~5% of SAM); \$25M is our Year-3 ARR target — the slice we win first. Early-mover advantage as AI shifts from tools to workflows.

The entry point is not a subscription. It's a sprint.

We get in the door with a fixed-fee project, prove value on a real brief, then convert to seats.

Who's building it.

FOUNDER / OWNER

David Parker

Twenty-six years in VFX & directing; led launches at The Mill NY & LA; Cannes-winning work; built and ran Jogger at Cut+Run. Built and runs JANE Studios, 2017 to present — a 100% founder-owned vehicle for this product.

ADVISORS

JANE — production partner; live-job testing & craft feedback

Westley Sarokin — CD; Emmy-nominated; 14 yrs at The Mill

Rich Rama — Executive Producer; client development

Lost Planet — Corwin (3x Oscar nom) · Klein (2x Oscar nom)

Laurent Ledru — Director/CD; immersive, animation, live-action; AI creator

Cole Schreiber — CD; writer/director, advertising & long-form

Ben Sposato — Head of Production; fast-turn delivery

Don Parker — Product & GTM counsel; Shotgun co-founder/CEO (exited)

3-Year ARR ramp — scenario analysis.

GROWTH STRATEGY

Year 1: \$1M–\$2M range

Year 2: \$8M scale-up

Year 3: \$25M target

EFFICIENCY

JANE: paying day one

Month 6: core ops covered

Month 18–22: Series A from traction

Your Mind

Every technological wave improves execution. TENET improves decision-making.

First.
