

PARENT COMPANY

ANONA

A collaborative creative software company.

FIRST PRODUCT

TENET

The platform that sits upstream of generation — where the creative decision actually happens.

Why we're building this.

For twenty-six years we've watched the same thing happen in the same rooms.

Money moves before clarity does. Decisions get made in the dark. Strong ideas die because no one can feel them yet — and weaker ideas survive because they're the only thing on the table when the clock runs out.

Across every one of those rooms, the same fault line: the moment between someone's idea and the version everyone can finally see.

TENET is the tool we've wished we could hand someone since the first time we watched a creative call cost a client three hundred thousand dollars they didn't need to spend.

1999 →	THE MILL	Visual effects on major campaigns
→	PSYOP	Direction and visual effects
→	MPC	VFX, brand & film
→	METHOD	VFX, episodic & brand
→	MJZ	Director, DGA member
→	JOGGER	Built inside Cut+Run
2017 – today	JANE	Founder & operator

Once production starts moving, flexibility disappears fast.

It's like realizing you want the bedroom two feet larger after the roof is already on the house.

The bedroom never gets bigger. The house just gets uglier and more expensive every day you keep trying to fix it.

AI can generate beautiful images and video faster than ever — but the core problem hasn't changed.

- 01 Scripts still evolve.
- 02 Clients still react.
- 03 Teams still struggle to align.
- 04 The strongest ideas still arrive too late.

What TENET actually is.

A collaborative creative development platform. The upstream layer where scripts and ideas become editable visual sequences — before expensive production decisions get locked.

Two companies. One feedback loop.

One builds the product. The other lives inside the problem every day.

Every feature is shaped inside active productions by teams solving real creative and production problems under actual deadlines.

You type a prompt, a finished shot appears. In real production, that's fiction.

01 - EDITORIAL WASTE

Hundreds of frames generated. Three survive the cut.

02 - PHOTOREAL ≠ PRODUCTION-READY

Beautiful frame. Wrong logo. Wrong tagline. Wrong color.

03 - CRAFT IS THE DIFFERENCE

Lens. Light. Deliberate imperfection.
The things AI doesn't know to do.

04 - DEPARTMENTS WORK IN SERIES

Sequential workflows. Each team waits for the last one to finish.

Built around existing editorial workflows.

TENET is not an editing platform. Editors stay in Premiere, Avid, Resolve. TENET feeds those tools — and learns from them.

TENET TRACKS

EDITORIAL RETURNS

which shots survived which didn't where craft refinement is worth the money

Most AI companies optimize execution.

Most AI companies optimize execution.

*TENET optimizes **alignment**.*

*The output is **conviction**.*

TENET starts before production.

The first stage is rapid creative exploration. Final rendering comes much later — and only on the shots that earn it. The sequence evolves live during reviews.

MOJO

Sequence

JETT JOURNEY

v0.2

LIVE

4 in session

DPEDITORCL

SCRIPT • SCENE 14

EXT. STREET CORNER — DAY

JETT blasts through the city. He threads past skaters and pull-up bars, weightless. The energy builds.

A dance circle forms. Beats stack. JETT crashes straight into the middle — and the crowd LOCKS IN.

CUT TO:

Top shot. Battle mode. Spins, slides, chaos in rhythm. One final move freezes the circle.

Editor noted: hold longer on 14a before the cut to crowd reaction. Currently 6 frames short.

EDITOR • 4M AGO
Hold 14a another six frames before cutting to 14b. The impact has to land before the crowd locks in.

DIRECTOR • 2M AGO
Crash angle is right. Bring the CAM arrow energy into the next two frames — keep the kinetic line.

BRAND • 30S AGO
MOJO tablets need to read in 3a-3c. Confirm headphone tone matches the brand orange across the sequence.

TIMELINE • REEL 01
00:14:08

Refinement starts after the story works.

Once the editorial structure is approved, visual refinement begins. Most AI workflows start with a text prompt. TENET starts with a creative decision.

Every other AI workflow starts with a guess.

*TENET starts with **intent**.*

One craftsperson locks the frame. Then generation begins.

FIRST FRAME → LAST FRAME · THE STILLS WE DEVELOPED BEFORE MAKING THEM MOVE

A craftsperson develops a still frame first — composition, lighting, lensing, production design, tone.

01	Composition	BLOCK · FRAME
02	Lighting	HOUR · DIRECTION
03	Lens language	OPTICS · GRAIN
04	Production design	SET · PROPS · WARDROBE
05	Tone	MOOD · GRADE

One eye shaping the shot until it feels right.

LOCKED STILL → GENERATED
MOTION

Same canvas. Same hero shot. Eight departments.

Same canvas. Same hero shot.

More craft people, working at the same time, against the same evolving target.

This is where TENET expands from advertising into feature films, episodic storytelling, and large-scale collaborative productions.

01	DP	CAMERA · BLOCKING
02	Production design	SET · PROPS · PALETTE
03	Locations	SCOUTING · REFS
04	Talent	CASTING · WARDROBE
05	Costume	STYLING · FITTING
06	VFX	LAYER PLANNING
07	Color	GRADE · CONTINUITY
08	Sound	ATMOSPHERE · TONE

REVISIONS PROPAGATE ACROSS DEPARTMENTS — AGAINST THE SAME EVOLVING TARGET.

EIGHT EYES · ONE CANVAS

More departments earlier — not fewer.

Brand integrity layer.

Upload the brand system once. TENET turns rules into structured production logic — applied automatically across every generated asset, edit, cutdown, and regional variant.
